Briefly Told

The third reading of the Irish Police Bill is down for Thursday.

Limerick's Poor

On its size and population Limerick has what may well be regarded as an inordinately high proportion of necessitous people. Through a variety of reasons, into which there is no practical use in entering in connection with this subject, employment is very scarce in the city, and the number of persons engaged at work does not yield them a proper living wage especially large. As a result of this there is in our midst not only hundreds who are in actual want of the bare necessities of life, but many scores of others who keenly feel the pinch of what is not "nearly described as genteel poverty. In ordinary times the winter is always a period of acute distress in Limerick, and if that is admitted—as it must be—it requires no labouring of the point to show that upon this upon which we have entered proves to be the most trying ever experienced by the poorer classes amongst us. Food prices are increased by something like 70 per cent round on an average, and the cost of fuel has gone up so much as to make that source of comfort practically entirely beyond the reach of those who have to make ends meet on what is in pre-war days barely sufficient to enable them to subsist. For these reasons the appeals made in the Town Hall on Friday at the annual meeting of the subcommittee to the local Fuel and Blanket Fund deserve fairly a more prompt but a more generous response than was given for the same purpose on any former occasion. The remarks made by the Most Rev Dr O'Dwyer, who presided, contain all that should be required to impress upon the charitably-disposed amongst us the urgent necessity of contributing as soon as possible to the fund and of giving the utmost that each can afford to subscribe. "This," truly observed his Lordship, "was going to be a very bad year on the poor. The prices of all the necessities of life had risen to an enormous extent. The cost of the common necessities of life such as bread, meat, potatoes, milk and butter had increased so much that it was really difficult to understand how poor families could subsist on their small wages." The Bishop struck an excellent note when he urged on the employers to take into account the great change in the times and make some provision for the necessities of their workers. After remarking that it was "their duty to do so," his Lordship went on to say—"In these exceptional times the real burden of suffering should not rest upon the poor while the well-to-do classes escaped with a mere reduction in their income. He hoped that the employers of labour in the city would do something to meet the necessities of the times as far as related to their employees, and that they would make some special provision for them by either providing fuel for their workmen or increasing their wages to such an extent as would enable them to procure fuel for themselves during the coming winter. If the employers did that, then the Fuel and Blanket Fund would come in and provide better for the lower strata of society."

These weighty words of the Bishop, who showed his own practical interest in the poor by handing in, on the spot, a cheque for £20, should be taken to heart by the city employers who are in a position to respond to the reasonable appeal they contain. But in the mean time who can contribute even any mite at all, no matter how small, should subscribe at once to the Fuel and Blanket Fund, which is intended for a worthy and deserving a purpose as will entitle all to the sympathy and arouse the charity and generosity of any people. In November last year we suggested the holding of a flag Day collection for the poor of the city, and the suggestion, as our readers will remember, was acted upon with most gratifying results. The willing workers who took part in the project at the time and made it such a magnificent success would, we feel sure, be only too happy to render similar services this season in the cause of such a deserving local charity.

To Develop Ireland

Big Scheme Anticipated

REPORTED INTENTIONS OF THE GOVERNMENT

Munitions and Increased Tillage

PROBLEMS RESULTS OF SIR MAURICE LEVY'S VISIT

The Dublin correspondent of the Sunday Chronicle writes:—

A solution of the situation in regard to available Irish man-power will probably be found in the anticipated developments of the munition and tillage industries, with the supply of supplies for War Office and Government purposes, as the result of the visit of Sir Maurice Levy, M.P., who has been commissioned to inquire into the possibilities of Irish munitions and supplies.

It is expected that a favourable report will be submitted to the Government, and that steps will be taken largely to develop Irish manufactures for war purposes.

An immediate start will be made with the establishment of a central receiving depot in Dublin, where samples may be inspected and general reports for distribution. Some manufacturers will be asked to co-operate in the execution of Government work, and an immensely increased demand for labour, skilled and unskilled, will necessarily follow.

This labour will be required, not only in the actual manufacture of munitions, but also in the production of supplies for War Office and Government purposes, as the result of the visit of Sir Maurice Levy, M.P., who has been commissioned to inquire into the possibilities of Irish munitions and supplies.
